AI Disclosure Statement (As of Checkpoint 1)

Restaurant AI

Purpose of This Disclosure

This document provides transparency regarding the use of AI tools in preparing project materials. The tools were used to support content development, visual creation, and presentation preparation. All outputs were reviewed, edited, and finalized by the team members.

AI Tools Used and How They Were Used

1) ChatGPT v5.2

Purpose: Visual generation support for presentation slides and Generation of Proposal
How it was used:

- ChatGPT was used to generate slide visuals based on prompt instructions.
- Prompts describe what content should appear on each slide visual.
- The generated visuals were then selected and placed into presentation slides as needed.
- Moreover, the generation of proposal was enabled by ChatGPT (but first a clear outline for what to include, details of citation and facts, our ideas for our project was created first by us without GenAI aid - then passed to generate a comprehensive proposal report).
  - Later edited with human oversight.

2) Claude Sonnet 4.5

Purpose: Concept clarification for literature review
How it was used:

- Claude Sonnet 4.5 was used primarily to help explain complex concepts from research articles.
- These explanations were used to improve clarity in the literature review sections.
- The final wording and interpretation included in the project were reviewed and adapted by the author.

3) Gemini and Scholar AI

Purpose: Presentation script generation and paper summarization support
How they were used:

- Gemini and Scholar AI were used to help generate presentation scripts.
- Prompts included instructions on what content needed to be summarized.
- Research papers were attached for analysis so that key points could be converted into presentation-friendly script content.
- Final scripts were edited by the author to match the project's intended tone and structure.
