

Survey Question

Interviewee: Restaurant Business Consultant - Interviewed at CP2

Question	Rating: Strongly Disagree (1) ~ Strongly Agree (5)	Comment
I think that I would like to use this system frequently	5	He views AI as an effective decision-support tool for analyzing large operational data sets and estimating potential demand.
I found the system unnecessarily complex	2	The manual's phase-based "Step-by-step playbook" aligns with his view that realistic business planning is complex and time-consuming.
I thought the system was easy to use	4	The automated checklists for "Regulatory compliance and licensing" address a major area he believes founders often overlook.
I think that I would need the support of a technical person to be able to use this system	2	He suggests AI is best for demographic and sales analysis, implying it is accessible but needs "managerial judgment" to apply.
I found the various functions in this system were well integrated	4	he system combines marketing, finance, and legal agents, which he agrees are essential areas for starting a business.
I thought there was too much inconsistency in this system	2	The manual provides consistent "guardrails" for startup budgets and labor costs based on structured data.
I would imagine that most people would learn to use this system very quickly	4	He notes that founders often spend too much time on design; this system forces them to focus on the "Concept summary" and

		"Financials" early.
I found the system very cumbersome to use	1	He values operational efficiency and performance monitoring, which the system supports through PDCA loops and ticket-time metrics.
I felt very confident using the system	3	While he trusts the data analysis, he warns that AI cannot fully understand "atmosphere" or "local community dynamics".
I needed to learn a lot of things before I could get going with this system	2	The manual is "Written in plain language for first-time owners," minimizing the initial learning curve.

Qualitative questions

1. What part of the tool was most useful? : easy to answer, also cell phone display is properly modified automatically.

The "Regulatory Agent" and the emphasis on "realistic business plans". Most founders focus on menu or decor and completely overlook the time and complexity of building permits and fire safety—this tool forces them to address those early.

2. What part felt confusing?: how details are needed for each question. Street No? Business concept, target customers?

The "Confidence: Medium" markers on the agents. While transparent, a beginner might not know what they need to provide to move that confidence to "High" or when to stop trusting the AI and call a human professional.

3. Did the AI suggestions feel locally grounded?

Partially. It handles demographic data and "tourism statistics" well to estimate demand. However, I would caution the founder that AI cannot fully grasp "subtle factors" like the local community dynamics or the "atmosphere" of a specific block.

4. Did the manual feel specific enough for a beginner founder?

It is a good start, but it needs more on "strategic positioning". It warns about "chain-adjacent" competitors, which is vital because many shops fail due to poor positioning even if the food quality is high.

5. What information was missing?

An agent for "Operational Sustainability". I see many owners burn out; the manual needs more robust systems for "performance monitoring" and "staffing adjustments" to ensure quality doesn't drop after month three.

6. Would you trust this tool for early restaurant planning? Why or why not?

I would trust it as a "support system," but not a substitute for "managerial judgment". It is excellent for "analyzing large amounts of operational data," but a successful owner must still develop a deep, human understanding of their employees and market.
